The technology that can relieve your lower back pain in just a zzzzip!*

Follow us to learn more:

PEDICLE SCREW FIXATION VS. INTERSPINOUS PROCESS DEVICES (ISP)

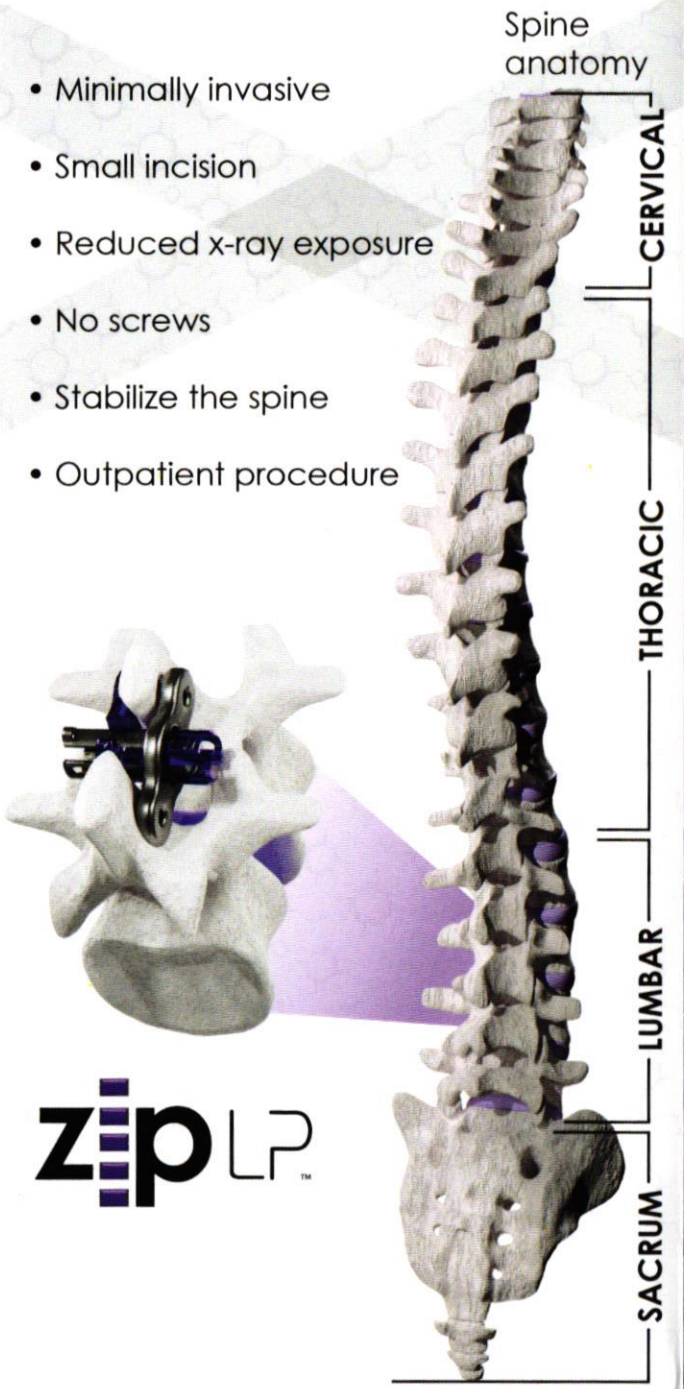

Pedicle screw fixation has been the most widely used method of stabilization. However, there has been an increase in the use of ISP devices as a less invasive alternative. ISP devices are positioned between the spinous processes versus pedicle screws which are drilled into the pedicles of the vertebrae in order to act as anchor points for the connection of rods and other hardware.

The question is: **Which procedure do you prefer?**

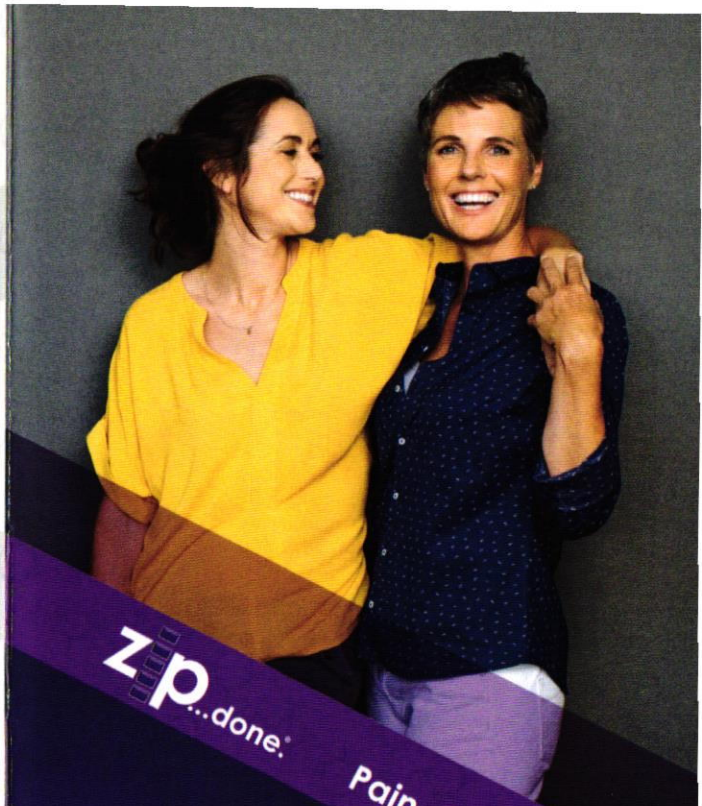

ADVANTAGES OF THE ZIP™ PRODUCT LINE

- Minimally invasive
- Small incision
- Reduced x-ray exposure
- No screws
- Stabilize the spine
- Outpatient procedure

ZIP LP™

ZIP...done.® Pain... gone!

Chronic pain is something many people live with every day. It can make simple routines seem like impossible feats and have a substantial impact on everyday life.

If you have been diagnosed with a herniated disk, lumbar spinal stenosis, spondylolisthesis, vertebral fracture, or degenerative disk disease, it may be necessary to undergo surgery.

Don't wait more and ask your doctor today.
